

IN THE CLAIMS

Please amend the claims as follows:

1. (currently amended) A method of acquiring content from an information transmission (101), the method comprising the steps of:  
receiving (102) the information transmission comprising a first content and an encrypted second content, which second content is a digitally storable copy of the first content;  
extracting the encrypted second content comprised in the information transmission when a receiver (103) of the information transmission effects an extracting operation;  
storing the encrypted second content at the receiver;~~and~~  
extracting a first decryption key, which is comprised in the received information broadcast (102), for decrypting the encrypted second content; and  
enabling decryption of the encrypted second content, whereby the second content is made renderable.
2. (canceled)
3. (currently amended) The method according to claim 2~~1~~, wherein said first decryption key is encrypted and the method further comprises the step of:

acquiring, from a content provider, a second decryption key for decrypting the encrypted first decryption key.

4. (currently amended) The method according to ~~any one of the preceding claims~~claim 1, wherein the first content and the encrypted second content are received on separate channels (301, 302).

5. (currently amended) The method according to claim 4~~3~~, wherein the first content and the encrypted second content are coordinated with each other on said separate channels (301, 302).

6. (currently amended) The method according to ~~any one of claims 1-3~~claim 1, wherein the first content and the encrypted second content are received on the same channel (401).

7. (currently amended) The method according to ~~any one of the preceding claims~~claim 1, wherein the information transmission (101) is an information broadcast.

8. (currently amended) A device (103) for acquiring content from an information transmission (101), the device comprising:

means (104) for receiving the information transmission, which transmission comprises a first content and an encrypted second content, the second content being a digitally storable copy of the first content;

means (105) for extracting the encrypted second content comprised in the information transmission, when the device is operated to effect an extracting operation;

means (203) for storing the encrypted second content at the device;

means (105) for extracting a first decryption key, which is comprised in the received information broadcast (102), for decrypting the encrypted second content; and

means (105) for enabling decryption of the encrypted second content, whereby the second content is made renderable.

9. (canceled)

10. (currently amended) The device (103) according to claim 9<sup>8</sup>, wherein said first decryption key is encrypted and the decrypting means is further arranged to decrypt the encrypted first decryption key with a second decryption key.

11. (currently amended) The device (103) according to ~~any one of~~  
~~claims 8-10~~claim 8, wherein the receiving means (104) is further  
arranged to receive the first content and the encrypted second  
content on separate channels (301, 302).

12. (currently amended) The device (103) according to ~~any one of~~  
~~claims 8-10~~claim 8, wherein the receiving means (104) is further  
arranged to receive the first content and the encrypted second  
content on the same channel (401).
